

# Adding Dependent

- Dependents less than 18 are managed by the primary member on the account. The primary member is responsible for completing the medical information for the minors before a consultation for them can be requested.
- Adult dependents added will be emailed login information to set up and complete their medical history.

## Click ‘My Family’ on top toolbar Then Click “My Dependents”

- Once the primary account holder has registered and is logged in to their account, they will need to hover over the option “My Family” on the top toolbar. Then click on “My Dependents” on the drop-down.

- On the next screen there is an option “Add New Dependent”

- Follow the prompts and fill out the information for each dependent.
- The primary account holder will be able to register their minor dependents once they have been added, but any dependent 18+ will have to register their own account once the primary member has added them. This is due to HIPAA regulations.
